Fertility Treatment Evaluations

When someone requests a fertility treatment evaluation, they are looking for a quick meeting to assess their current life situation, previous difficulties, and coping skills to ensure the best possible outcome for the fertility treatment. At ECC, evals include one assessment session, a BDI and Burns Anxiety Inventory, and one brief report to include the information obtained at the assessment session.

The total fee for Fertility Treatment Evals are as follows:

Intern: \$100

LPCC: \$240

LPC: \$290

Psychologist: \$320

This fee should be charged *in total* at the assessment session. The therapist should use two line items in the invoice (and use their hourly fee for each item):

96130: Psych Eval - Diagnostic Intake

96130: Psych Eval – Interpretation and Reporting (first hour)

When scheduling with a client, we need to know the date by which they need the report. (We give the therapist one week to complete the report after the assessment session.)

Prior to the assessment session, the client will complete our typical paperwork. In addition, we will ask the client to come 10 minute early so they can complete the BDI and Burns Anxiety Inventory. The therapist can then briefly look at those two assessments to see if further assessment is required.

The therapist will use a Fertility Treatment Evaluation Intake form, which includes all the information required for the report.

A sample report is included on our training website.
